

Security Assessment Report

Generated by Antigravity

Scan ID: 11

Target: <http://testaspnet.vulnweb.com>

Date: 2025-12-17T09:43:55.388093

Executive Summary

This report details the findings of an automated security scan performed on <http://testaspnet.vulnweb.com>. A total of 7 issues were identified.

Critical/High Issues: 2

Medium Issues: 3

Low/Info Issues: 2

The scan engine performed comprehensive checks including HTTP Header analysis, HTTP Method auditing, Directory Enumeration, Basic SQL Injection testing, and XSS probe.

Detailed Findings

1. Missing Header: Content-Security-Policy [High]

The Content-Security-Policy security header is missing.

Remediation: Configure your web server (Nginx/Apache) to send the missing header.

2. Missing Header: Strict-Transport-Security [High]

The Strict-Transport-Security security header is missing.

Remediation: Configure your web server (Nginx/Apache) to send the missing header.

3. Missing Header: X-Frame-Options [Medium]

The X-Frame-Options security header is missing.

Remediation: Configure your web server (Nginx/Apache) to send the missing header.

4. Missing Header: X-Content-Type-Options [Medium]

The X-Content-Type-Options security header is missing.

Remediation: Configure your web server (Nginx/Apache) to send the missing header.

5. Server Info Leak [Low]

Server header exposed: Microsoft-IIS/8.5

Remediation: Consult standard security guidelines for this issue.

6. Unsafe Method Enabled: OPTIONS [Medium]

Method OPTIONS returned status 200

Remediation: Disable this HTTP method in your server configuration.

7. Sensitive File Found: /robots.txt [Low]

Accessible file or directory found at /robots.txt. Risk level depends on content.

Remediation: Consult standard security guidelines for this issue.
